TECHNOLOGY / INTRA-LOGISTICS / COMPANY PUBLICATION

## **Schmidt-Seeger sets the course for the future**

### **Machine and plant manufacturer increases turnover and company earnings**

*Beilngries, January 2008* – The medium-sized enterprise Schmidt-Seeger looks back on an extraordinarily successful business year 2007. Both turnover and profit could be significantly increased. The globally acting machine and plant manufacturer was likewise successful on European markets as in American and Asian regions. Especially for India, Schmidt-Seeger assesses bright prospects for the future and a large potential for growth, and that's why the Indian market shall be developed by India Private Limited, a further Schmidt-Seeger subsidiary. Due to the fact that Schmidt-Seeger was granted two large orders at the end of 2007, the general tendency for the new business year is already quite gratifying.

Within remodelling the concept of the company, one part of the accompanying measures for a successful development of the firm was the corporate changes. Since January 2008, the former Schmidt-Seeger AG (joint stock company) operates as GmbH (limited liability company), thus following the company structure of the parent company ATON GmbH.

Schmidt-Seeger is one of the worldwide leading suppliers of grain management systems. The product range comprises high-tech solutions for grain storage and processing, for the production of malt as well as milling systems. Schmidt-Seeger GmbH is a global supplier of comprehensive „all-in-one solutions“, i.e. ideas and solutions from one hand, ranging from the conceptual design to the commissioning of complete plants.
